

SYSTEMS AND METHODS FOR
REDUCING CUT-OFFS IN PROGRAM RECORDING

Abstract of the Disclosure

5 [0091] A media recording system may be provided.
The recording system may include features for reducing
recording cut-off of a particular media event due to
changes in the start time and end time of what is
scheduled to be recorded. The recording system may
10 provide a user with an opportunity to select a program
by for example, selecting a listing, to have that
program automatically recorded at a scheduled time for
presentation to viewers. Changes in the schedule of
programs may be compensated manually or automatically
15 when the recording system receives information about
actual or predicted time changes. In a manual mode, a
user may adjust start or end times based on time change
information that is displayed. For an automatic mode,
the recording system may automatically compensate for
20 predicted or actual time changes that are known by
automatically adjusting the start and end times of
recording.
